

## **Bluetooth-enabled Pen**

### **ABSTRACT**

5 The method and system of the present invention allows a user to make notes on a paper book, where the information is transmitted to and overlaid on an online electronic duplicate of the book through a Bluetooth-enabled pen. The system and method of the present invention provides extension of the user's off-line experiences to an online environment, which may have application in

10 electronic reading, writing, and shopping.
